Mr. Will Yates, Phil Mckenzie and Mr. Philip Dovich,
PSSA and Marine Chemists Association
1515 Fairview Avenue E
Seattle, WA 98102

May 17, 2010

Dear Will Yates, Phil Mckenzie and Philip Dovich,

Subject: GasAlertMicro 5 Free Pump Upgrade Offer

It is my pleasure to announce the release of our Generation 2 integrated sampling pump for GasAlertMicro 5 gas detectors. As valued partners, I would like to extend to your members a free upgrade for each of their existing GasAlertMicro 5 Series gas detectors to the latest hardware and software, regardless of warranty status for the next 90 days.

To facilitate delivery of their new pumps we have created a special website for the members of PSSA, the Marine Chemists Association, and your associations within the maritime industries to include ship repair, shipbuilding, shipbreaking, and related employers. The site will be open for 90 days from the date of this notification, closing Sunday, August 15, 2010.

The new hardware in the Generation 2 pump is designed to provide more consistent, reliable performance and simpler operation. With completely new internal components and a visible integrated filter, this hardware change is designed to address dust/water ingress and false alarms. The new design enables operation over a wide temperature range and extends sample-tubing lengths.

Note: Generation 2 pumps are compatible with older GasAlertMicro 5 Series and X5 instruments, but for proper operation instruments shipped prior to April 20, 2010 must be upgraded to the latest software (firmware version 37, 23c, 22i released on March 23, 2010 or higher). This upgrade includes important new safety routines.

For more information on the new GasAlertMicro 5 Generation 2 pump, please visit our website at www.gasmonitors.com. Please feel free to contact me should you have any questions.

Finest regards,

Ken Schmidt

Built better to perform better.

GasAlertMicro 5 Series

GasAlertMicro 5 Series portable gas monitors now have a new Generation 2 pump that's been extensively redesigned to provide greater performance, consistently and reliably, even under the most severe industrial conditions.

- Extended sample draw – up to 66 ft. / 20 m with sintered filter and 10 ft. / 3 m with sample probe
- Wide temperature range pump performance (-4 to +144°F / -20 to +50°C) ensures uptime
- Save time sampling – connect your hose and go
- Seamless pump integration with existing GasAlertMicro 5 Series detectors and accessories such as MicroDock II docking station, concussion-proof boots and holsters*

Easy to replace filter with window provides at-a-glance condition of the filter

Double the filtering protection – coarse metallic secondary filter

Change filters as often as you like – thread insert prevents screw threads from wearing

Now with an easily replaceable nozzle – use the same quick connect fitting to secure sampling hoses and probes quickly.

New gold brush motor component reduces electrical current variations, minimizing false alarms

New pump module installs easily

No-hassle captive screw, efficient filter change

Order Information

M5-PUMP Pump kit (yellow)[†]
M5-PUMPB Pump kit (black)[†]
M5-PR-1 Pump only (yellow)
M5-PRB-1 Pump only (black)

M5-AF-K3 Spare filters, kit of 5
M5-AF-K3-100 Spare filters, kit of 100
M5-PN-1 Spare nozzle

[†] Pump kits include pump module, 1 ft. / 0.3 m sample probe with hydrophobic barrier (water trap) and particulate filter, 5 ft. / 1.5 m sample tubing, three particulate filter spares and one water trap spare.

*Note: Generation 2 pumps are compatible with older GasAlertMicro 5 Series and X5 instruments. Instruments shipped prior to April 20, 2010 must be upgraded to the latest firmware (version 37, 23c, 22i released March 23, 2010 or higher). This upgrade includes important new safety routines.
